

I think that satalite radio is a outstanding service that consumers elect to pay for. The signal that I recieve always comes thru clear at all times,weather does not affect it's clear signal. The news channell's,sports,the weather channell and all types of music channell's are available to everyone that choses to use there service as well as all broadcast channell's. Are some broadcasters having a hard time competing or are they losing listerners to XM ?
